Fastcase gives you nearly complete control over the way your search results are displayed. You can filter your results, sort your results six different ways, and see further search suggestions for your search.

Filter Case Results by Jurisdiction, Authority Level, or Document Type

- Easily filter your results down to cases from one jurisdiction using the Filters on the left.
The Tag Cloud

- The tag cloud is an algorithm that runs in tandem with your search, looking for legal terms of art and other phrases that are present in your relevant documents.

- The displayed terms can then be added as a search term to your current search to focus your search further. Click on the term you are interested in and then select from the two options below:
  - **Include:** the search term must be present in the relevant results
  - **Exclude:** the search term must not be present in the relevant results.

- The size of the term indicates how frequently it appears in the relevant results.

You can also see the tag cloud in list format. The term that is at the top of the list is most frequently appearing, while the term that is at the bottom of the list appears least frequently.
Sort Case Results to Suit Your Needs

- You have complete control over the way your search results are displayed. Choose the results view that is best suited to your research project.
- At the top of the results list are the headers for the columns of information. Click on the header to sort cases per that category. Documents can be sorted by:
  - Relevance.
  - Date.
  - Total Cites.
  - Cited in Results

<table>
<thead>
<tr>
<th>Case</th>
<th>Relevance Score</th>

</tbody>
</table>

Fastcase Relevance Score

- Fastcase’s smart search technology assigns a Relevance Score (0%-100%) to each document in your search results based on the search terms used in the query.
- The score is displayed on the left side of the case.
- The purpose of the Fastcase Relevance Score is to tell you which documents on your list of search results are more likely to contain a substantive discussion of the search terms you entered. The higher the percentage, the more likely that the document contains a substantive discussion of the topic.
- By default, your search results will be displayed in the Relevance Score order (meaning the case with the highest relevance score is at the top of the list).
Fastcase Relevance Customization

- Fastcase is the first legal research system to make our relevance algorithm transparent and modifiable by you the user.
- To view the settings, click on Jurisdiction and Sources, then click on Advanced.
- The purpose of each of the sliders displayed is to adjust how much impact the different factors in the algorithm have in the content. Adjusting the factors does not change what documents are shown, but does change what order the documents are shown in when sorted by Relevance. The factors are:
  - **Document properties**
    - **Responsiveness**: Documents that have the search terms close together are preferred.
    - **Importance**: Cases that are cited many times are preferred.
    - **Authority**: Cases from sources of higher authority are preferred.
    - **Date**: More recent cases are preferred.
  - **Document Usage**
    - **Frequently Read**: Favors documents that are read more often by Fastcase users.
    - **Frequently Favorited**: Favors documents that are saved more often by Fastcase users.
    - **Frequently Downloaded**: Favors documents that are downloaded more often by Fastcase users.
    - **Frequently Emailed**: Favors documents that are emailed more often by Fastcase users.
- You can set up a combination that meets your preferences, or use the default settings.
